Προς εμένα

Hi Theodoros,

We don't register domain names on behalf of our clients. This is because many country domains are limited only to businesses and individuals living in that country. It looks like the .gr registry can be found from <http://www.gr>. The domain you need to register is pleiades-paros.gr and use the domain name servers given below. Once the registration is complete www.pleades-paros.gr will resolve to our server ip.

Dear sirs,

Thanks for responding promptly in providing the requested service.

However I have two questions:

I wanted to know whether you have registered the domain name www.pleades-paros.gr I though the DNS registration is taken care by you. I tried to ping this url, however it cannot be resolved. Do I need to do something ? Is there something that I have to configure in liferay with respect to the DNS name of the portal ?

I really appreciate you help.

Kind regards
Theodoros Stroh
